New Discovery 2004
Epithermal gold-quartz vein system
- 4 reconnaissance soil lines identify a strong gold-in-soil anomaly
- 300m wide over a strike length of 150m.
- Gold values range from 50-300 ppb
- Chip samples in hand trench showing 0.02 ppt Au over 4m; open to expansion.

NIC ZONE
Au-Ag epithermal quartz veins and breccias
- Prominent gold in soil anomaly
- Hand chip samples average 1.03 ppt Au
- Wet grav up to 25.3 ppt and silver up to 160 ppt
- Check assays: 27.3 ppt Au, 209.3 ppt Ag
- Hand trench channel sampling includes 3.2 ppt Au over 3.5m, 3.7 ppt Au over 8.7m, 2.7 ppt Au over 1.0m

PV ZONE
Bonanza Valley
- 2.5 km² area of Au-Ag epithermal quartz veins; a foot
- Rock sample results up to 43.3 ppt Au and 130.7 ppt Ag
- Broad multi-element soil anomaly
