Introduction

The Computer Forensics Tool Testing (CFTT) program is a joint project of the Department of Homeland Security (DHS), the National Institute of Justice (NIJ), and the National Institute of Standards and Technology (NIST) Special Programs Office and Information Technology Laboratory (ITL). CFTT is supported by other organizations, including the Federal Bureau of Investigation, the U.S. Department of Defense Cyber Crime Center, U.S. Internal Revenue Service Criminal Investigation Division Electronic Crimes Program, and the U.S. Department of Homeland Security's Bureau of Immigration and Customs Enforcement, U.S. Customs and Border Protection and U.S. Secret Service. The objective of the CFTT program is to provide measurable assurance to practitioners, researchers, and other applicable users that the tools used in computer forensics investigations provide accurate results. Accomplishing this requires the development of specifications and test methods for computer forensics tools and subsequent testing of specific tools against those specifications.

Test results provide the information necessary for developers to improve tools, users to make informed choices, and the legal community and others to understand the tools' capabilities. The CFTT approach to testing computer forensics tools is based on well-recognized methodologies for conformance and quality testing. Interested parties in the computer forensics community can review and comment on the specifications and test methods posted on the CFTT Web site (<https://www.cfft.nist.gov/>).

This document reports the results from testing the hardware write blocking function of the CRU Forensic UltraDock using the CRU WriteBlocking Validation Utility, Version 2.0.2.1. The CRU WriteBlocking Validation Utility uses the same test method as the CFTT Federated Testing Test Suite for Hardware Write Blocking.

Federated Testing is an expansion of the CFTT program to provide forensic investigators and labs with test materials for tool testing and to support shared test reports. The goal of Federated Testing is to help forensic investigators to test the tools that they use in their labs and to enable sharing of tool test results. CFTT's Federated Testing Forensic Tool Testing Environment and included test suites can be downloaded from <https://www.cfft.nist.gov/federated-testing.html> and used to test forensic tools. The results can be optionally shared with CFTT, reviewed by CFTT staff, and then shared with the community.

Test results from this and other tools can be found on DHS's computer forensics web page, <https://www.dhs.gov/science-and-technology/nist-cfft-reports>.

Federated Testing Test Results for Hardware Write Block Device: WiebeTech Forensic UltraDock v6

1. Test Information

Organization/Tester Name	WiebeTech-Nick G
Operating System	Windows 10 Pro (6.2.9200.2)
CRU WriteBlocking Validation Utility	2.0.2.1
Notes	---

2. Write Blocker Information

Name	Forensic UltraDock v6
Manufacturer	WiebeTech
Serial Number	3-039273-A
Firmware	80.66.0000

3. Drive Information

Name	Disk 1 (10.91 TB)
Manufacturer	Seagate
Model	ST12000DM0007-2GR116
Serial Number	ZCH08K1J
Firmware Revision	DN01
Interface	USB 3.1
Drive Type	SATA

NOTE: Results may vary depending on bus type.

For this reason, if you have alternate bus ports provided on your device or write blocker, it is recommended you test all interfaces available.

4. Summary

PASS	No sectors on the drive were modified during the test.
